In the stratosphere the temperature of the atmosphere rises with increasing height, a phenomenon created by the absorption of solar radiation by the ozone layer. The ozone layer effectively blocks almost all solar radiation of wavelengths less than 290 nanometres from reaching Earth's surface, including certain types of ultraviolet (UV) and other forms of radiation that could injure or kill most living things.

SCI COMMUN### Paleontology An unusually complete Tyrannosaurus rex fossil was sold last week for a record-breaking \$31.8 million at an auction, dismaying many paleontologists. They worry such sales will encourage more private trade of fossils, leaving important specimens off-limits to researchers. The auctioned fossil, officially called BHI 3033, is popularly known as Stan, after its ...
